

Theses

PhD theses form a rich and previously untapped research resource. University and national repositories all over the world now collect research theses and make their details, and often their full text, available online to everyone, everywhere.

Take a look at the thesis collection in TROVE, the National Library of Australia, for example, or South Africa's National Electronic Thesis & Dissertation portal, or theses at an Institutional Repository like ORBi at the University of Liege.

The British Library's Electronic Thesis Online Service (EThOS) provides a UK collection by harvesting from university repositories across the country. EThOS provides access to over 300,000 UK thesis records and access to over 100,000 UK full text theses and it harvests theses from our repository, Cadair, as well as those from 127 other UK universities, at least monthly.

Benefits of thesis deposit

- Raises author and institution profile through circulation and citations.
- Research community benefits from access to findings that otherwise are not published.
- Research can be accessed, read and built upon by people outside of traditional UK Higher Education
- Research is easily shared through use of permanent online identifier

Thesis deposit at Aberystwyth University

Aberystwyth University made deposit of postgraduate dissertations and theses mandatory in 2009 with possible embargos for sensitive or commercial research.

From 2013 this mandate is specifically relevant to research theses which are harvested by EThOS, although Cadair continues to accept Masters theses from postgraduates who started their programme before 2013.

Postgraduates should submit an electronic copy of their thesis to their department with the print version, along with the declaration forms which can be found, along with the specific [guidance](#). Each thesis is then uploaded into Cadair along with bibliographic information and an abstract and after it has been cleared by the University's copyright manager these will be made available online.

If a postgraduate has requested an embargo to prevent immediate Open Access and this has been signed off by a senior member of their department on the above form, then the bibliographic data and abstract only, will be visible to the public – and if appropriate the thesis will become visible after a two year period.

For further guidance and information please contact is@aber.ac.uk with Cadair in the subject line.
